

Testing Procedure for Bluetooth

Installation of “Blynk” app on your phone and uploading the code:

Install “Blynk” library in Arduino IDE before following steps

Now, Install “Blynk” app in your phone and then

1. Make **new project by selecting Device: “ESP32 Dev board” and the connection type: Bluetooth**
2. the Authorization code you will receive in your email id and put your authorization code inside the code below
`char auth[] = "YourAuthToken";`
3. Upload the code “ESP32_BLE” to board.
4. **Now in mobile app, click on “+” icon and scroll down and select Bluetooth**
If you can see the device name as “**Blynk**” and it is connecting that means Bluetooth is working properly
